

## **Lhermitte-duclos Disease: A Case Report.**

Dr Varun Chaudhary<sup>1</sup>, Dr Ami Jani<sup>2\*</sup>

### **ABSTRACT:**

Lhermitte-Duclos disease (LDD) is a benign neoplasm of posterior fossa, involving cerebellum. It is also known as Dysplastic Cerebellar Gangliocytoma. It is not a true neoplasm but a hamartoma. It can be either isolated finding or associated with Cowden disease (Multiple Hamartoma Syndrome). Lhermitte-Duclos disease typically presents in young adults.

**Key Words:** Dysplastic Cerebellar Gangliocytoma, Hamartoma, Lhermitte duclos disease.
